Topic: Support for the Use of Alcotox

02 February 2022

To whom it may concern:

My name is Dr. Rosanna D'Addosio - a family physician and full professor in Maracaibo, Venezuela. Alcohol related disease is a major health concern worldwide. Closer to home, my country is dealing with an alcohol abuse problem. The World Health Organization (WHO) notes that nearly 7% of Venezuelans suffer from an alcohol use disorder. This unfortunately leads to high numbers of liver disease, cancer, and traffic accidents.

We need to do something new to address this issue and Alcotox is a great way to do so. Alcotox directly reduces the majority of acetaldehyde, alcohol's deadly byproduct. In doing so, it helps reduce the 200+ alcohol-related medical pathologies. Nearly 7% of Venezuelans suffer from alcohol-related liver disease, cancer, and vehicular collisions alone! Furthermore, the ingredients are safe to consume and have an extremely low risk of interactions with any other medications that the user may be taking for hypertension, diabetes, or other conditions. This is great news for the individual drinker and society as a whole.

I am aware of the evidence to date showing Alcotox's efficacy in reducing hangovers and improved liver enzyme profiles. As such, Alcotox appears to be an extremely promising answer to address the public health morbidity/mortality related to drinking alcohol. I am very impressed with the outcomes to date that Alcotox has been able to achieve. At this time I give Alcotox my personal recommendation as a safe, effective, and healthier way to drink alcohol

Respectfully,

Rosanna D'Addosio, M.D, PhD
Professor, The University of Zulia
